Art Unit: 2111

1. Claims 1-24 are presented for examination.
2. The abstract of the disclosure is objected to because the current abstract does not reflect the inventive feature of the claimed invention to distinguish over the prior art. Correction is required. See MPEP § 608.01(b).

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- (a) Claim 1, the configuration of the registers and the execution units are not clear.
- (b) Claim 2, it is not clear what is meant by "execution units may be register files".
- (c) Claim 24, the same as (a).

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1, 3, 4, 12, and 24 are rejected under 35 U.S.C. 102(b) as being anticipated by Pechanek et al, U.S. Patent No. 5,659,785.

Pechanek et al teaches the invention as claimed in claim 1 including a microprocessor with an architecture incorporating several execution units, whereby (a) one or more registers store results from particular execution units (108; col. 4, line 12), (b) execution unit operands receive data from one such register (fig. 4B), (c) certain execution units are able to copy data from their operands to result registers (col. 2, line 9; col. 8, line 47), (d) the copy capability is used to allow execution units that are not directly connected to communicate data (col. 10, line 61), and

further teaches as in claims 3, 4, and 12

(e) the set of registers associated with a particular execution unit to be written may be specified for each operation and the specification of registers to write is represented in an instruction format including copy operation (col. 4, lines 35-41) – claims 3, 4, and 12.

The method claim 24 is equivalently rejected based on the same reason.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Bekooji et al taught a method of passing data from register file to register file.

Arora et al taught a method of providing a copy to separate register file.

Leijten et al taught a method alternate to a copy operation.
